

Fision Skin Lift | One of the earliest known cosmetic active ingredients is also one of the most common and beneficial nutritional products known to modern man — milk. Milk proteins, highly concentrated in essential amino acids and extremely biocompatible, are the key component of Fision Skin Lift.

Fision Skin Lift is an exceptionally synergistic combination of two all-natural skin tightening materials, plus a natural tightening booster that provides a smooth and long-lasting effect on the skin.

Hydrolyzed Casein

Derived from milk, this nutritive and moisturizing compound is the primary skin tightening ingredient in Fision Skin Lift.

Acacia Senegal Gum

A naturally-derived material more often seen in food (especially candy) applications, this constituent adds tightening, smoothing, and feel-improving properties.

Xanthan Gum

The “secret ingredient” in Fision Skin Lift, this thickener and film former prolongs the tightening effect on the skin.

Preservative

A small amount of preservative is added to complete the final complex.

Fision Skin lift offers an immediate and perceptible skin feel, suitable for all skin types. It is especially suitable for treatment products, and for mature-skin formulations.
